

August 16, 2017

Geoff Klein
Tennessee Department of Environment and Conservation
Knoxville Environmental Field Office
3711 Middlebrook Pike
Knoxville, TN 37921

Dear Mr. Klein,

On behalf of the University of Tennessee, I am pleased to submit the enclosed fifth annual report for the NPDES Permit issued February 8, 2017. Below is a summary of information and accomplishments for the University of Tennessee Stormwater Management Program for the 2017 Fiscal Year.

1.0 Executive Summary

This annual report documents The University of Tennessee's compliance with the Stormwater management program requirements as detailed in the Municipal Separate Storm Sewer System (MS4) National Pollutant Discharge Elimination System (NPDES) permit number TNS076121. This annual report contains program information and accomplishments from July 1, 2016 to June 30, 2017.

1.1 Program Highlights

Best Management Practices Inventory Program highlights and milestones during the reporting period consist of the following:

- The BMP manual titled University of Tennessee Best Management Practice Manual A Stormwater Planning and Design Manual for Stormwater Management Practices was updated to include more clarified and descriptive guidelines concerning best management practices.
- Adopt-A-Stream and River Rescue programs.
- Hosted the Tennessee River Runoff 5K on campus that highlighted UT's BMP's and green infrastructure.
- Conducted over 82 Stormwater Compliance Inspections on active construction projects.
- Update of the Stormwater Management Plan consisting of:
 - UT Best Management Practices Manual
 - Public Information and Education Plan
 - Illicit Discharge Program and Policy
 - Runoff Reduction Policy
 - Stream Monitoring Plan
 - Stormwater Management Standard Operating Procedures

- Enforcement Response Plan
- Outfall Monitoring and Dry Weather Screening Report
- Spill Prevention Control and Countermeasures Plan
- The Stormwater Student Assistant received TDEC EPSC Level 1 Certification.
- Benthic Survey and Water Quality Survey on Contributing Waters
- Development of Stormwater Master Plan

1.2 Program Modifications

Program modifications that occurred during the reporting period consist of the following:

Established a Stormwater Bank for use on future projects.

1.3 Program Advising

The previously established Stormwater Advisory Committee meets quarterly to review Stormwater Management recommendations to be presented to the Vice Chancellor for Finance and Administration. The charge of this committee is to serve as oversight for the development and implementation of the University's Stormwater Master Plan.

2.0 Municipal Separate Storm System Information

2.1 Population Served

Due to the seasonal nature of the University of Tennessee, the population densities vary considerably throughout the year. Special events, contractors, vendors, and normal traffic further contribute to our temporary populations. Based on recent enrollment records, the annual student population is over 27,000. The total University staff consists of over 9,600 full time and part time employees.

2.2 Service Area

The University maintains and operates only those portions of the storm sewer system located within the University property boundaries of Main Campus and the Institute of Agriculture Campus. The University of Tennessee properties specifically addressed in this permit cover an area of approximately 580 acres.

Remote University facilities such as properties south of the Tennessee River are primarily rural with less defined Stormwater conveyances. Stormwater runoff at these sites is managed in compliance with pertinent requirements for those locations. These sites are not included in the NPDES MS4 Stormwater Permit.

Many discharges from University outfalls include run-on contributions from the City of Knoxville storm sewer system, but the primary drainage at the outfalls is conveyed from the University.

2.3 MS4 Conveyance System

The storm sewer system for the University of Tennessee conveys water from approximately 1 square mile of University owned land into several watersheds including Second Creek, Third Creek, East Fork Third Creek, and the Tennessee River. Throughout campus, Stormwater runoff is collected in various BMP devices, curb inlets, area drains, and similar drainage structures that lead to the storm sewer system. The runoff is conveyed primarily through underground piping which eventually discharges into open stream channels before leaving University property.

2.4 Land Use Composition Estimates

The following are estimated land use activities within the University's jurisdictional area.

Estimated Percentages:		
Office and Institutional	21%	
Parking	14%	
Roads/Sidewalks/Current Construction	28%	h.
Athletics	7%	
Green Space	30%	

2.5 Receiving Streams

The University of Tennessee contributes runoff into Second Creek, Third Creek, East Fork Third Creek and the Tennessee River/Fort Loudoun Lake. Table 1 below summarizes information provided by the Tennessee Department of Environment and Conservation on the various receiving waters of the State.

Table 1: Receiving Stream Summary

Water Body ID	Water Body	Segment/Length	303d Cause	TMDL

3.0 Public Education and Outreach

An integral part of the Stormwater Management program involves the education of the campus community and others about water resources, how we affect water quality, and what we can do to minimize pollution and lessen our impact on the environment. To facilitate this, the University has developed a Public Information and Education (PIE) plan that outlines target pollutants, target groups, programs/events and measurable goals to provide information to the campus community. The campus community (excluding athletic events) includes over 37,000 students, faculty, staff, contractors, vendors and visitors. The Public Education and Outreach program metrics are summarized in Table 2 below.

Table 2: Public Education and Outreach summary

Fiscal Year 2017 Metrics	Quantity	Target Audience

Presentations				

4.0 Public Participation and Involvement

4.1 Public Participation Program

The University provides opportunities for stakeholders and the public to participate in the Stormwater Management Program development and implantation through:

- The Stormwater Advisory Committee, which is a group comprised of University stakeholders who oversee the development and implementation of the permitted Stormwater Management Program.
- The Water Quality Forum, which is comprised of local MS4s that work towards a common goal of increasing water quality in our shared watershed.
- The Tennessee Stormwater Association (TNSA), which is comprised of a statewide MS4s, Consultants and State Regulators that work to help each other build consistent Stormwater management programs and ultimately increase water quality.
- The Environmental Compliance Team which is comprised of various University department representatives who ensure the campus stays within compliance of all environmental programs.
- River Rescue, which is an annual event that the University helps facilitate to clean up our local waterways. We sponsor two locations on campus, had 62 volunteers and were able to collect two dump truck loads of trash.
- The Adopt a Stream program, which provides an opportunity for our faculty, staff and students to take ownership in stream segments that run through campus. These groups focus on invasive vegetation removal and trash pickup.
- Student project assistance and advising, which provides information and project consulting to students working on projects related to Stormwater Management. These student projects range anywhere from Engineering, to Landscape Architecture to Advertising.
- The Invasive Removal Events, was an event where student volunteers from ESS220 Waters and Civilizations course aided the Stormwater Coordinator and student assistant with removing invasive plant species from the Second Creek streambank.
- Arbor Day Tree planting involved 52 Volunteers planting over 1000 trees along the 2nd Creek streambank.

4.2 Public Reporting Program

The University provides an opportunity for the public to participate in the Stormwater Management Program development and implementation through reporting of environmental concerns and illicit discharges. Information on reporting Stormwater related problems have been publicized on the Stormwater awareness info graphics, Stormwater awareness stickers, the Stormwater display in the University Center and on the Stormwater webpage, which has a feature that allows users to submit an electronic form that is sent to the Stormwater Management Coordinator.

Table 4: Public Reporting Program summary

Fiscal Year 2017 Metrics	Quantity
Reported Environmental Concerns	2
Reported Illicit Discharges	2

5.0 Illicit Discharge Detection and Elimination

5.1 Storm Sewer System Inventory

Previously, a consultant was hired by the university to map all of the underground utilities for the UTK campus. The completed mapping is now being field verified and updated. Additionally, the Stormwater Coordinator and Student Assistant dry-weather screen all outfalls twice a year. The program has transitioned from paper forms to electronic forms thus increasing efficiency for completing this task.

5.2 Illicit Discharge Program

A standard operating procedure (SOP) for illicit discharge detection and elimination has been developed and is in place. Illicit discharges are identified either in person, or via submittal of the electronic form located on the website, or via telephone calls of concern placed by the public. There is currently a substantial amount of construction on the Main Campus, which increases the likelihood that construction related illicit discharges may occur. An Illicit Discharge Policy prohibiting this type of activity, and the associated Enforcement Response Plan were being updated at the time of this report.

In addition to the SOP and Policy, Outfall Inventory and Dry Weather Screening events are conducted on a semi-annual basis in our 4 receiving streams. A standardized Outfall Inventory data sheet is utilized for collecting all necessary information in the field and documenting illicit discharge inspections at outfall locations. 64 outfalls have been identified and investigated as part of this process and an Outfall inventory and dry weather screening report has been prepared.

Table 5: Illicit Discharge Program summary

Fiscal Year 2017 Metrics	Quantity
Electronic forms received	0
Phone calls received	3
Illicit Discharges detected	2
Illicit Discharges resolved	2
Outfalls Inspected	64

6.0 Construction Site Runoff Control

The University of Tennessee is a state agency and is subject to the State erosion and sediment control regulations as specified in the State of Tennessee general NPDES permit for discharges of Stormwater associated with construction activities. For projects disturbing greater than or equal to 1.0 acres, a Stormwater Pollution Prevention Plan (SWPPP) and associated Erosion and Sediment Control Plan are submitted to the University Stormwater Management Coordinator for review and then submitted to TDEC for review and issuance of a Notice of Coverage prior to commencement of land disturbing activities. For projects disturbing 0.1 to 0.99 acres, the erosion and sediment control plans are submitted to the University Stormwater Management Coordinator for review and approval prior to commencement of land disturbing activities as outlined in the Stormwater Management Standard Operating Procedures.

All projects at the University that have a land disturbance component are required to follow the regulations outlined in the NPDES permit and are subject to enforcement procedures outlined in the Enforcement Response Plan. Unlike other permitted MS4s, the University is typically the owner, developer, and project manager for on-campus projects. Construction requirements and penalties are outlined in the project contract, and typical enforcement is tied to payment and final project acceptance. All approved projects on campus are inspected by the University Stormwater Management staff on at least a monthly basis. All inspections are performed using the TDEC Erosion and Sediment Control Handbook as guidance.

The Construction Site Runoff Control Program is performance based and is quantifiable through the number of plan reviews/approvals, inspections performed, complaints received and enforcement actions issued. These measureable goals are summarized in Table 6 below.

Table 6: Construction Site Runoff Control Program summary

Fiscal Year 2017 Metrics	Quantity
TDEC CGP Permits	9
University Plan Review/Approval	13
Projects Receiving NOVs	7
University Erosion and Sediment Control Inspections	82
Publicly Reported Construction Site Issues	4

7.0 Post Construction Runoff Control

The University has developed and implemented a Runoff Reduction policy. This policy provides guidelines to ensure site design standards for all new and redevelopment projects disturbing greater than 1 acre, require management measures that are designed, built and maintained to infiltrate, evapotranspire, harvest and/or reuse at minimum the first inch of every rainfall event preceded by 72 hours of no measurable precipitation. In addition to this policy the University's post construction Stormwater control program includes post construction runoff inspections, a Best Management Practice Inventory and Maintenance Program, and a Best Management Practices Manual- A Stormwater Planning and Design Manual for Stormwater Management Practices.

8.0 Pollution Prevention and Good Housekeeping

The University's pollution prevention and good housekeeping operations span a collection of multiple individual programs;

- 1. Stream Monitoring Program
- 2. NPDES-Regulated Industrial Facilities
- 3. Stormwater Collection System Operations and Maintenance
- 4. Permenant Stormwater BMP Operations
- 5. Landscape Services Operations and Maintenance
- 6. Snow Removal and Control
- 7. Recycling and Solid Waste Management
- 8. Hazardous Waste Management
- 9. Vehicle Cleaning

These nine programs are described in more detail below.

8.1 Stream Monitoring Program

Stream monitoring of impaired water bodies is required as a component of the MS4 permit to assess the effectiveness of the BMPs in achieving contaminant load allocations. Both analytical monitoring and non-analytical monitoring are required in stream segments listed as impaired. A sampling plan has been developed to satisfy the requirements of the MS4 permit for all 303d listed streams that have the pollutant source identified as discharges from MS4 areas. Implementation of this plan will be used to evaluate the effectiveness of the University's Stormwater Management Program. At minimum these stream segments will be sampled on a 5 year rotation as required. Additional sampling may be conducted as needed. A summary of samples collected as part of the stream monitoring program are summarized in table 7 below.

Table 7: Stream monitoring summary

	Samples to be conducted				
Stream Segment	Macro Invertebrate Stream Survey	E. Coli	Total Suspended Solids	Nitrate / Nitrite	Visual Habitat Assessment
East Fork Third					
Creek	1	2	2	0	2
Third Creek	2	2	2	2	2
Second Creek	2	2	2	2	2
Total Samples to be					
Collected	5	6	6	4	6

A Benthic Study was completed in cooperation with a representative from TDEC. This study looked at 5 total locations (2 Third Creek, 2 Second Creek, 1 East Fork Third Creek) in water bodies influenced by campus operations. The Stormwater Management Program used Dinkins Biological Consulting to collect and process the red samples. Following internal review that data was shared with the local TDEC Environmental Field Office.

8.2 NPDES regulated Industrial Facilities

The University's Steam Plant located on Lake Loudon Boulevard maintains a Tennessee Multi Sector General Permit (TMSP) for Stormwater discharges associated with industrial activity. This Facility is permitted as a steam electric power generating operation. Historically this facility has been fueled by combustion of coal. The use of coal as a fuel source was discontinued in March 2015, and Natural Gas will be used going forward.

Table 8: NPDES Regulated Industrial Facilities summary

Fiscal Year 2017 Metrics	Quantity
NPDES Stormwater Regulated Industrial Facilities	1
Compliance Audits Performed	0
Audited Facility Not in Compliance	0

8.3 Stormwater Collection System Operations and Maintenance

The Stormwater collection system operations and maintenance is performed both by our in house utilities division and outsourced through task managed contracts. The operations and maintenance work performed consists of storm drain cleaning, removal of blockage, cleaning of catch basins and area drains, the inspection and pump out of proprietary water quality treatment devices. Collected material removed from the Stormwater collection system is hauled off site and disposed of properly.

Table 9: MS4 Operations and Maintenance summary

Fiscal year 2017 Metrics	Quantity
Catch Basins/ Inlets Cleaned	11
Stormwater Collection System Repair Work Orders	46
Water quality units inspected	18
Water quality units pumped out	16

8.4 Permanent Stormwater BMP Operations

The University owns and operates various permanent Stormwater Best Management Practices on Campus. See Table 10 below for a breakdown of BMP type.

Table 10: Stormwater BMP summary

Type of BMP	Total Devices	Quantity	Unit
Stormwater Harvesting and Reuse	7	79,000	Gallons
Water Quality Unit	18	18	Units
Rain Garden	3	6,900	Square Feet
Permeable Pavement System	3	38,480	Square Feet
Dry Detention	3	3	Locations
Green Roof	2	14,622	Square Feet
Silva Cell Bioretention	9 locations	116	Trees
Grassed Swale	1	895	Linear Feet
Vegetated Filter Strip	4	7,670	Linear Feet

Routine monthly BMP inspections, rainfall event triggered inspections (following events exceeding 0.5 inches of rainfall in a 24 hour period), and maintenance are performed under the supervision of staff qualified in Stormwater inspection, as well as operations and maintenance. Standardized maintenance tasks are outlined in the UT BMP Manual and are specific to each type of applicable BMP.

A Stormwater Master Plan and Vision document was development to reflect the evolution of our Stormwater Management Program, and progress the campus has made in Stormwater Management.

The University made application for and was awarded the TWRA State Stream Clean-up Grant valued at \$800. As a part of the grant clean-up supplies such as work gloves, refreshments for volunteer support and trash pickers. Students, staff and community volunteers assist in the clean-up process.

8.5 Landscape Services Operations and Maintenance

Landscape Services is responsible for the maintenance and improvement of the campus grounds on the Main and Agricultural campuses. This includes mowing, raking, mulching, fertilizing, weeding, edging, litter pick-up, street sweeping, grading, excavating, trenching, demolition,

hauling, asphalt preparation, landscape design, planting, transplanting, pruning, and tree removal.

Two vacuum trailers are dedicated to perform leaf collection during the 3 month long leaf season. Collected leaves are transported to our compost facility to be incorporated into the campus composting operation

Table 11: Landscape Services Operations and Maintenance summary

Fiscal year 2017 Metrics	Quantity
Landscaped Area Maintained (acres)	165 (estimated)
Leaves / Woodchips / Brush Composted (Tons)	972.56 tons

8.6 Snow and Ice Removal and Control

Landscape Services provides ice and snow removal services for the Main and Agricultural campuses. These services are provided on a priority basis, with safety of the greatest number of individuals being used to determine the order of service. The universities salt and de-icing supply is stored in an enclosed area to prevent Stormwater contact.

Table 12: Snow and Ice Removal and Control summary

Fiscal year 2017 Metrics	Quantity
Salt Applied	50 tons
Alternative De-icing Product Applied	66.3 tons

The Alternative De-icing Product is 80% Salt and 20% CCL (Calcium-Chloride).

8.7 Recycling and Solid Waste Management

The University maintains a comprehensive recycling and solid waste reduction program including contract dumpsters with plugs and lids, 106 plastic/cans recycling stations, 80 cardboard recycling stations, 63 paper recycling stations, 30 compost stations, and one public drop off location. All waste collection areas are picked up 1-5 times per week depending on location and need.

Table 13: Recycling and Solid Waste Management Program summary

Fiscal year 2017 Metrics	Quantity
Compost/Food	449.48 tons
Green Waste	972.56 tons
Construction and Demolition (non-landfill/recycled)	169.53 tons
Scrap Metal	228.28 tons
Office Paper (mixed)	426.57 tons
Glass	24.31 tons
Cardboard	397.32 tons
Plastic (mixed)	253.93 tons
Paper Shredding	100 tons

Fiscal year 2017 Metrics	Quantity
Textiles (mattress, carpet, clothing donations)	50.79 tons
Pallets	131.96 tons
Electronics	20 tons
Batteries	2.26 tons
Used Motor Oil	2.52 tons
Cooking Oil	14.04 tons
Hard Plastics	1.58 tons
Light bulbs/Ballasts	16.07 tons
Cinder Blocks	15 tons
Scrap Wood	4.85 tons
Dumpsters Repaired	40
Dumpsters Replaced	4
Service Requests	1,158

8.8 Hazardous Waste Management

The University's Environmental Health and Safety department provides a collection service for all Hazardous and Acutely Hazardous Waste substances. This service is provided to the University labs, shops and storage facilities that generate these types of waste as well as other types of waste materials that require special disposal or handling procedures such as mercury lamps. Incident response agreements are continuously maintained with the City of Knoxville Fire Department.

8.9 Vehicle Cleaning

Fleet Management has an engineered wash bay facility on campus for washing vehicles. This facility discharges to the sanitary sewer system. There is no vehicle washing that could cause impacts to the storm sewer system permitted outside of the facility constructed for this purpose.

Please see the attached Small MS4 Annual Report Form CN-1291.

Please call me at (865) 805-4007 if you have any questions concerning this report.

Sincerely,

Garrett Ferry, CPESC

Stormwater Management Coordinator

- E. Summarize the public education, outreach, involvement and participation activities you completed during this reporting period: River Rescue, 3 Adopt a Stream events, Stormwater Runoff 5K, Arbor Day Tree Planting, "talk with an Environmentalist" Earth Month acitivity, 4 guest lectures.
- F. Summarize any specific successful outcome(s) (e.g., citizen involvement, pollutant reduction, water quality improvement, etc.) fully or partially attributable to your public education and participation program during this reporting period: Two dump truck loads of trash (one from second creek and one from third creek) were removed with the help of 62 volunteers during April 1st River Rescue. An estimated 18,220 cubic feet of invasive plant debris were removed from the riparian zone of Second Creek during Adopt a Stream event on February 23rd, March 31st, and April 13th of 2017. During the Arbor Day Tree Planting, volunteers were able to plant and establish 1000 native trees along Second Creek riparian zone.

4.	Illic	it Discharge Detection and Elimination (Section 4.2.3)		
	Α.	Have you developed and do you continue to update a storm sewer system map that shows the location of system outfalls where the municipal storm sewer system discharges into waters of the state or conveyances owned or operated by another MS4?	⊠ Yes	□ No
	B.	If yes, does the map include inputs into the storm sewer collection system, such as the inlets, catch basins, drop structures or other defined contributing points to the sewershed of that outfall, and general direction of stormwater flow?	⊠Yes	□ No
	C.	How many outfalls have you identified in your storm sewer system? 64		
	D.	Do you have an ordinance, or other regulatory mechanism, that prohibits non-stormwater discharges into your storm sewer system?	⊠Yes	□ No
	E.	Have you implemented a plan to detect, identify and eliminate non-stormwater discharges, including illegal disposal, throughout the storm sewer system? If yes, provide a summary: Illicit Discharge Detection and Ellimination System, Bi-annual Dry Weather Screening	⊠ Yes	□No
	F.	How many illicit discharge related complaints were received this reporting period? $\underline{2}$		
	G.	How many illicit discharge investigations were performed this reporting period? 2		
	H.	Of those investigations performed, how many resulted in valid illicit discharges that were as eliminated? $\underline{2}$	ddressed and/	or
5.	Co	nstruction Site Stormwater Runoff Pollutant Control (Section 4.2.4)		
	A.	Do you have an ordinance or other regulatory mechanism requiring:		
		Construction site operators to implement appropriate erosion prevention and sediment control BMPs consistent with those described in the TDEC EPSC Handbook?	⊠ Yes	□No
		Construction site operators to control wastes such as discarded building materials, concrete truck washout, chemicals, litter, and sanitary waste?	⊠ Yes	□ No
		Design storm and special conditions for unavailable parameters waters or Exceptional Tennessee Waters consistent with those of the current Tennessee Construction General Permit (TNR100000)?	⊠ Yes	□ No
	B.	Do you have specific procedures for construction site plan (including erosion prevention and sediment BMPs) review and approval?	⊠ Yes	□No

Phase II Small Municipal Separate Storm Sewer System (MS4) Annual Report

	C.	Do you have sanctions to enforce compliance?	⊠ Yes	□ No
	D.	Do you hold pre-construction meetings with operators of priority construction activities and inspect priority construction sites at least monthly?	⊠ Yes	□ No
	E.	How many construction sites disturbing at least one acre or greater were active in your juri period? 11	sdiction this re	porting
	F.	How many active priority and non-priority construction sites were inspected this reporting p	eriod? 11	
	G.	How many construction related complaints were received this reporting period? 4		
6.	Pe	ermanent Stormwater Management at New Development and Redevelopment Projects (Sec	tion 4.2.5)	
	Α.	Do you have a regulatory mechanism (e.g. ordinance) requiring permanent stormwater pollutant removal for development and redevelopment projects? If no, have you submitted an Implementation Plan to the Division?	⊠ Yes ⊠ Yes	□ No
	B.	Do you have an ordinance or other regulatory mechanism requiring:		
		Site plan review and approval of new and re-development projects?	Yes	□No
		A process to ensure stormwater control measures (SCMs) are properly installed and maintained?	⊠ Yes	□ No
		Permanent water quality riparian buffers? If yes, specify requirements: Since all receiving streams are wathers with unavialable parameters we use a 60ft water quality ripairian buffer on all projects adjacent to streams.	⊠ Yes	□ No
	C.	What is the threshold for development and redevelopment project plans plan review (e.g., disturbing greater than one acre, etc.)? <u>All Projects</u>	all projects, pro	ojects
	D.	How many development and redevelopment project plans were reviewed for this reporting	period? 13	
	E.	How many development and redevelopment project plans were approved? 13		
	F.	How many permanent stormwater related complaints were received this reporting period?	<u>0</u>	
	G.	How many enforcement actions were taken to address improper installation or maintenance	e? <u>0</u>	
	H.	Do you have a system to inventory and track the status of all public and private SCMs installed on development and redevelopment projects?	⊠ Yes	□No
	I.	Does your program include an off-site stormwater mitigation or payment into public stormwater fund? If yes, specify. We have developed a Stormwater Mitigation banking system. no projects have participated in this system at this time.	⊠ Yes	□ No
7.	Sto	rmwater Management for Municipal Operations (Section 4.2.6)		
	A.	As applicable, have stormwater related operation and maintenance plans that include informaintenance activities, schedules and the proper disposal of waste from structural and nor controls been developed and implemented at the following municipal operations:		
		Streets, roads, highways?	☐ Yes	⊠ No
		Municipal parking lots?	☐ Yes	⊠ No
		Maintenance and storage yards?	⊠ Yes	□No
		Fleet or maintenance shops with outdoor storage areas?	⊠ Yes	☐ No

Page 3 of 6
